Dear Chairman Cole and Ranking Member DeLauro,

As you prepare to markup the Commerce, Justice, Science, and Related Agencies (CJS) Appropriations Act for Fiscal Year 2026, we the undersigned faculty members at Stanford University respectfully ask you to reconsider the decision, listed in your July 14 press release, "[d]irecting the re-establishment of the DOJ China Initiative." U.S. security and prosperity depends crucially on the brilliance, creativity, and energy of our work force – especially our scientists, engineers, and entrepreneurs. In the global competition for talented individuals, the China Initiative in its original form proved to be more harmful than beneficial – it served the recruitment goals of the PRC better than any "talent program" they ever implemented.

Data supports the conclusion that if we are to sustain our leadership in science, technology, and innovation, the United States must attract and retain highly-skilled talent from all nations, including China. Our concern is that a reinstated "China Initiative" will have a direct negative impact on our ability to compete by discouraging the flow of talent into our country and pushing out existing talent. According to the National Academies report entitled, "International Talent Programs in the Changing Global Environment," "[t]he U.S. science, technology, engineering, and mathematics (STEM) workforce plays a vital role in fostering and sustaining innovation, economic competitiveness, and national security". This report specifically recommended that "[t]he U.S. government...should continue to take measures to address lingering chilling effects of the China Initiative and create an attractive and welcoming environment for domestic and international talent of all races and ethnicities". To remain competitive, we need to employ both international and domestic talent.   A consequence of programs like the China Initiative is that they impede the talent pipeline, thereby undermining our ability to foster domestic innovation and U.S. leadership in science and technology.

On September 8, 2021, many of us signed a letter to the U.S. Attorney General urging the termination of the China Initiative. In February 2022 the DOJ terminated the China Initiative and announced the DOJ NSD's new Strategy for Countering Nation-State Threats. At the same time, Assistant Attorney General for National Security Matthew Olson explained "that

this [China] initiative is not the right approach to meet the threat in the coming years. Instead, the current threats demand a broader approach." The China Initiative was not the right approach then and it is not the right approach now.

Our country benefits from both domestic and international talent, particularly in STEM fields. Immigrants constitute 45% of the U.S. STEM workforce with PhD degrees. According to a 2022 study based on the National Science Foundation's Survey of Doctorate Recipients, over three-quarters of international STEM PhD recipients from American universities remained in the United States after completing their degrees. The numbers are even higher for Chinese national PhD graduates, at about 90%. Many of those who stay in the United States work for top private sector employers engaged in cutting-edge research and development. However, as pointed out in a 2020 analysis, in some competitive fields such as AI, although the stay rate of U.S.-trained PhDs has been well over 80%, this has recently been challenged by both immigration obstacles and increased international competition for top talent.

To be clear, we acknowledge the importance of protecting US military and industrial secrets from theft by malign foreign entities. Very careful and targeted measures for risk management, can and should be used to address security risks to the United States from scientific exchange with other nations, including China.   But they must be crafted such that they do not, inadvertently, cause us more harm than benefit.

This letter expresses the opinion of the signers – not of Stanford University. We hope that it provides additional context on why a reinstatement of the China Initiative or any iteration of it would be counter to our shared goals of promoting American competitiveness and economic security.

 Sincerely yours,

Steven A. Kivelson
